

Bowling ball out and back challenge

Name: _____

Color & mass of ball (kg)					Date: _____	Period: _____
Length (tiles)						
	<i>Start/stop area</i>	<i>Pushing area</i>	<i>Coasting area</i>	<i>Pushing area</i>	<i>Turn around area</i>	
Length (m)						

- Out:** Push the ball with the broom in the first _____ m, then you can't touch it for the next _____ m. In the final _____ m, push it to slow it down so you can turn it around once you enter the **turn zone**.
 - You have about one meter of **turn zone** in which you can turn the ball around. The ball cannot cross the line at the back of the turn zone.
- Back:** You then push to turn the ball around, and repeat these steps for the path back to the start.
 - You have another meter of **start/finish** zone in which the ball must stop.

Outbound trip time (s)	Departed <i>(should be zero)</i>	Crossed first line	Crossed second line	Arrived	
	Arrived	Crossed first line	Crossed second line	Departed	
Return trip time (s)	Arrived	Crossed first line	Crossed second line	Departed	
	Departed	Crossed first line	Crossed second line	Arrived	
Out	Calculations → and result	Acceleration (m/s/s) (assume $v_i = 0$)	Velocity (m/s) <i>Hint: Solve this before accelerations</i>	Acceleration (m/s/s) (assume $v_f = 0$)	← Calculations and result
	Calculations → and result	Force (N)	Force (N)	Force (N)	← Calculations and result
Back	Calculations → and result	Acceleration (m/s/s) (assume $v_i = 0$)	Velocity (m/s) <i>Hint: Solve this before accelerations</i>	Acceleration (m/s/s) (assume $v_f = 0$)	← Calculations and result
	Calculations → and result	Force (N)	Force (N)	Force (N)	← Calculations and result

Bowling ball circle challenge

Name:

Period:

Sketch of your circle and pit stop area. Label the radius.		Color and mass of ball (kg)	
		Circle radius (m)	
		Time (s)	
Circumference (m) show calculation		Velocity (m/s) show calculations	
Centripetal acceleration (m/s/s) show calculation			
Centripetal force (N) show calculation
